Availability on DBPedia

The screenshot shows a web browser window with the address bar displaying `wiki.dbpedia.org/search/node/Hadith%20arab`. The browser's address bar also shows several open tabs: DBpedia, AGLDWG, MOOCs - start to e..., Semantic Web Cour..., W3C RDF Validation..., My presentations [...], and Omar Series Episod... The browser's interface includes a home button, a search bar, and a hamburger menu icon in the top right corner.

Search

Your search yielded no results

- Check if your spelling is correct.
- Remove quotes around phrases to search for each word individually. *bike shed* will often show more results than *"bike shed"*.
- Consider loosening your query with *OR*. *bike OR shed* will often show more results than *bike shed*.

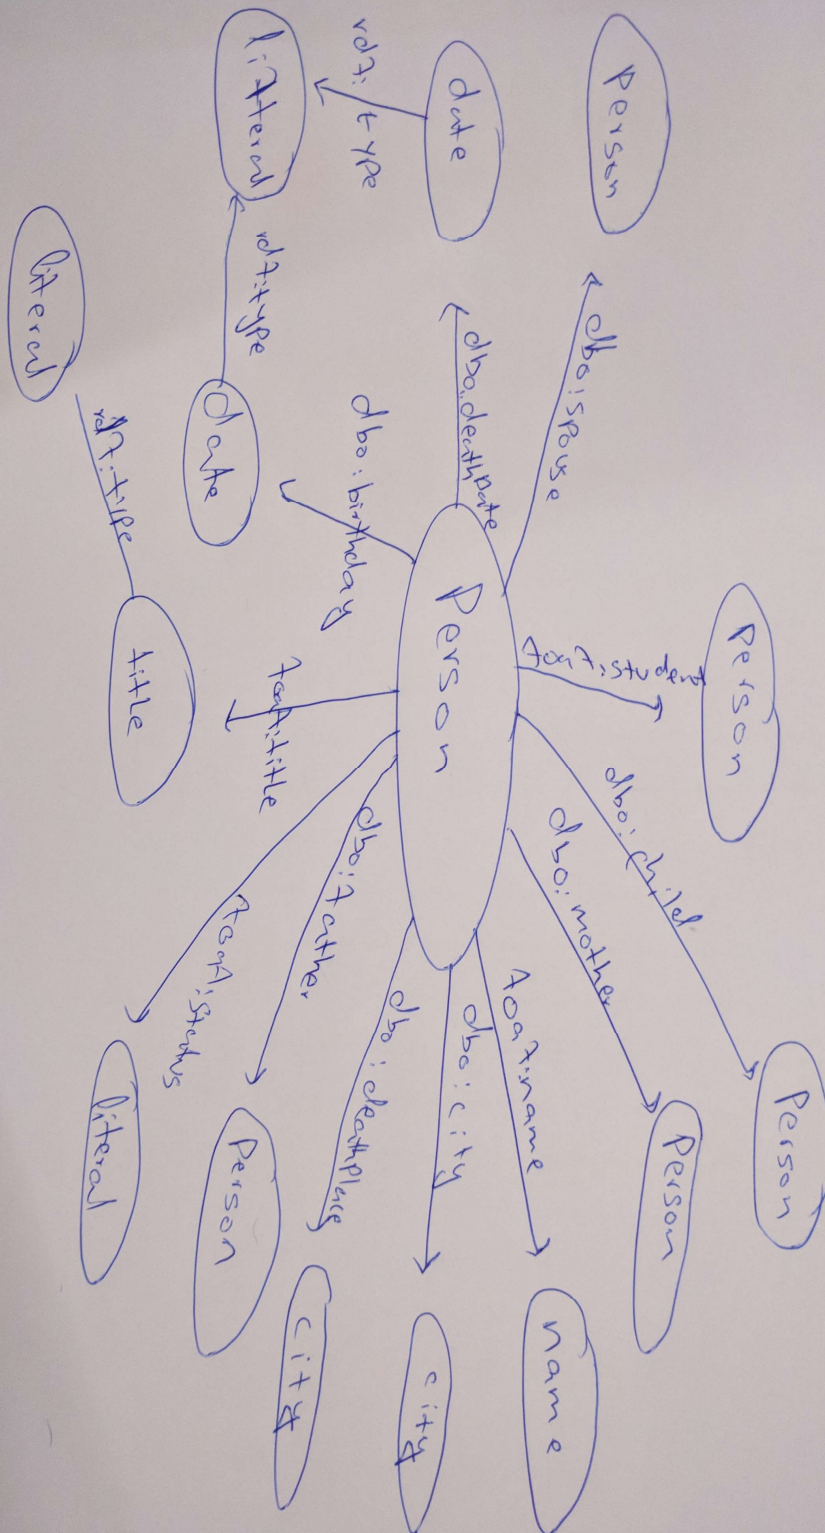

Competency Questions

1. Which rawi belong to which place?
2. Which rawi has which teacher?
3. Which has which student?
4. Who is the children of whom?
5. Who is the wife/husband of whom?
6. What is the grade of any rawi?

Tools and Methods used

1. Open Refine : It is tool made by GOOGLE which help us to convert simple data from **csv to rdf** form. After uploading the data I have created the sparql end points of DPPedia and WikiData and reconciled it with them. Afeter Reconciliation I have generated RDF file and downloaded it
2. GraphDB : it is use to do sparql queries on rdf data . I wrote some sparql queries and tested the results against my original data and it gave me correct output

Conceptual Model

SPARQL Queries

```
